

# MusIQkids' SmarterKids Training

In a project funded by OCE Connections, first-year students in the GBC Game Development program designed the art, assets and animations for the educational game based on MusIQkids' Smarter Kids Training (SKT) modules. According to MusIQKids, testing suggested that children included the training group improved up to 14 IQ points more than the control group. The project produced a working beta prototype that was used for final product development, ultimately taking the Smarter Kids module to market.
